IPGRI publications are available free of charge to the libraries of genebanks, university departments, research institutions, etc. On request to Head, Editorial and Publications Unit, titles may also be made available to individuals who can show that they have a need for a personal copy of a publication. E, F, S and C indicate English, French, Spanish, and Chinese, respectively. Titles marked with * are available only as photocopies. Various descriptor lists are available for downloading in portable document format from IPGRI's web site (URL: <http://www.cgiar.org/ipgri/>).
Descriptors for

*Lathyrus*

spp.
The International Plant Genetic Resources Institute (IPGRI) is an autonomous international scientific organization, supported by the Consultative Group on International Agricultural Research (CGIAR). IPGRI’s mandate is to advance the conservation and use of plant genetic resources for the benefit of present and future generations. IPGRI’s headquarters is based in Rome, Italy, with offices in another 15 countries worldwide. It operates through three programmes: (1) the Plant Genetic Resources Programme, (2) the CGIAR Genetic Resources Support Programme, and (3) the International Network for the Improvement of Banana and Plantain (INIBAP). The international status of IPGRI is conferred under an Establishment Agreement which, by January 1998, had been signed and ratified by the Governments of Algeria, Australia, Belgium, Benin, Bolivia, Brazil, Burkina Faso, Cameroon, Chile, China, Congo, Costa Rica, Côte d’Ivoire, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, Greece, Guinea, Hungary, India, Indonesia, Iran, Israel, Italy, Jordan, Kenya, Malaysia, Mauritania, Morocco, Pakistan, Panama, Peru, Poland, Portugal, Romania, Russia, Senegal, Slovakia, Sudan, Switzerland, Syria, Tunisia, Turkey, Uganda and Ukraine.

Financial support for the Research Agenda of IPGRI is provided by the Governments of Australia, Austria, Belgium, Brazil, Bulgaria, Canada, China, Croatia, Cyprus, Czech Republic, Denmark, Estonia, F.R. Yugoslavia (Serbia and Montenegro), Finland, France, Germany, Greece, Hungary, Iceland, India, Ireland, Israel, Italy, Japan, Republic of Korea, Latvia, Lithuania, Luxembourg, Macedonia, Malta, Mexico, Monaco, the Netherlands, Norway, Peru, the Philippines, Poland, Portugal, Romania, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Turkey, the UK, the USA and by the Asian Development Bank, Common Fund for Commodities, Technical Centre for Agricultural and Rural Cooperation (CTA), European Union, Food and Agriculture Organization of the United Nations (FAO), International Development Research Centre (IDRC), International Fund for Agricultural Development (IFAD), International Association for the promotion of cooperation with scientists from the New Independent States of the former Soviet Union (INTAS), Interamerican Development Bank, Natural Resources Institute (NRI), Centre de coopération internationale en recherche agronomique pour le développement (CIRAD), Nordic Genebank, Rockefeller Foundation, United Nations Development Programme (UNDP), United Nations Environment Programme (UNEP), Taiwan Banana Research Institute (TBRI) and the World Bank.

PREFACE

Descriptors for *Lathyrus* spp. was developed by Dr R.L. Pandey, Dr P.N. Mathur, Dr Stefano Padulosi and Dr R.N. Sharma with inputs from Dr K.W. Riley, Dr V. Ramanatha Rao, Dr Larry Robertson and Dr Bhag Mal. The development of this descriptor list has been coordinated by Dr P.N. Mathur. A draft version prepared in the internationally accepted IPGRI format for descriptor lists was subsequently sent to a number of international experts for their comments and amendments. A full list of the names and addresses of those involved is given in ‘Contributors’.

IPGRI encourages the collection of data for all five types of descriptors (see Definitions and Use of Descriptors), whereby data from the first four categories – Passport, Management, Environment and site and Characterization – should be available for any accession. The number of descriptors selected in each of the categories will depend on the crop and the importance of the crop’s description. Descriptors listed under Evaluation allow for a more extensive description of accession, but generally require replicated trials over a period of time.

Although the suggested coding should not be regarded as the definitive scheme, this format represents an important tool for a standardized characterization system and it is promoted by IPGRI throughout the world.

This descriptor list provides an international format and thereby produces a universally understood ‘language’ for plant genetic resources data. The adoption of this scheme for data encoding, or at least the production of a transformation method to convert other schemes to the IPGRI format, will produce a rapid, reliable and efficient means for information storage, retrieval and communication, and will assist with the utilization of germplasm. It is recommended, therefore, that information should be produced by closely following the descriptor list with regard to ordering and numbering descriptors, using the descriptors specified, and using the descriptor states recommended.

This descriptor list is intended to be comprehensive for the descriptors that it contains. This approach assists with the standardization of descriptor definitions. IPGRI does not, however, assume that each curator will characterize accessions of their collection utilizing all descriptors given. Descriptors should be used when they are useful to the curator for the management and maintenance of the collection and/or to the users of the plant genetic resources. However, highly discriminating descriptors are marked as highlighted text to facilitate selection of descriptors.

Multi-crop passport descriptors (see Annex I) were developed jointly by IPGRI and FAO, to provide consistent coding schemes for common passport descriptors across crops. They are marked in the text as [MCPD]. Please note that owing to the generic nature of the multi-crop passport descriptors, not all descriptor states for a particular descriptor will be relevant to a specific crop. In Annex II, the reader will find a Collecting form for *Lathyrus* that will facilitate data collecting.

Any suggestions for improvement on the Descriptors for *Lathyrus* will be highly appreciated by IPGRI.
AN INTRODUCTION TO LATHYRUS

The genus *Lathyrus* is large, with 187 species and subspecies (Allkin *et al*. 1983) that are found in both the Old World and the New World. However, only one species (*Lathyrus sativus*) is widely cultivated as a food crop, while other species are cultivated to a lesser extent for both food and forage. These species include *L. cicera*, *L. clymenum* and *L. ochrus* for grain but mainly for forage production; *L. tingitanus*, *L. latifolius* and *L. sylvestris* as forage species; *L. odoratus* for ornamental purposes. A newly described species, *Lathyrus amphicarpus*, is presently found in the Middle East and has the potential of becoming important as a self-seeding forage species (Campbell 1997).

Several botanical varieties of *L. sativus* and *L. cicera* have been noted in North Africa and the Near and Middle east. These include: var. *albus* (white flowers), var. *roseus* (pink or red flowers) and var. *cyaneus* (blue flowers) for *L. sativus*; var. *genuinus* Rouy, var. *angustifolius* Rouy, var. *longistipulatus* Sennen and var. *ciliatus* Lipsky for *L. cicera*. In addition to these botanical varieties, several native ecotypes have been reported for the genus *Lathyrus*.

Vavilov (1951) described two separate centres of origin for *Lathyrus*. One was the Central Asiatic Centre, which includes northwest India, Afghanistan, the Republics of Tajikistan and Uzbekistan, and western Tian-Shan. The second was the Abyssinian Centre. In addition, Vavilov noted trends in diversity similar to those found in other pulses, such as lentils and broad beans, in that smaller-seeded forms were found in southern and southwest Asia, whereas around the Mediterranean region, almost all were highly cultivated forms with large white seeds and flowers (Jackson and Yunus 1984). According to Zeven and de Wet (1982) there are centres of diversity for Old World species in Asia Minor and the Mediterranean region. Saraswat (1980) reported that *Lathyrus* is an ancient crop and its existence is recorded as long ago as 2000–1500 BC in India. However, the combination of archaeological and phytogeographical evidence gathered now lead to the conclusion that the origin of *L. sativus* cultivation is in the Balkan peninsula, in the early Neolithic period, dated to the beginning of the 6th millenium BC (Kislev 1989).

The descriptors for *Lathyrus* are mainly based on diversity observed for the three most important useful and widely cultivated species of genus *Lathyrus*: *L. sativus*, *L. cicera* and *L. ochrus*, all cool-season species propagating themselves by seed. However, these descriptors also can be used for other *Lathyrus* species.

*Lathyrus sativus* is an erect or ascending, much-branched, bushy or slender legume reaching a height of 30-90 cm with a deep, much-branched taproot with numerous, normally bluish-purple flowers carried on a stiff axillary stalk, and with glabrous pods each containing 2-5 seeds. Grasspea ecotypes are classified on the basis of flower colour, markings on pods, and size and colour of seeds. The geographical distribution is: the blue-flowered lines are concentrated in Southwest Asia and Ethiopia, whereas the white and mixed-colour lines are found in Europe, the Canary Islands and countries of the former USSR. *Lathyrus sativus* was cultivated and extensively naturalized in Central, South and East Europe (from Germany south to Portugal and Spain and east to the Balkans and South Russia), Crete, Rhodes, Cyprus, Syria, Lebanon, Palestine, Egypt, Caucasus, Iraq, Iran, Afghanistan, North and Central India, Central Asia (Balkhash to Palmir-Alai), Macronesia (Madeira, Canaries, Azores), and was also
cultivated in North Africa (Morocco, Algeria), tropical Africa (Sudan, Ethiopia and S. Africa) and experimentally in Australia. Today significant areas of cultivation are to be found in the North and Central India, Pakistan, Bangladesh and Ethiopia. Smaller areas are cultivated in Spain, China, Chile and possibly some other countries. 

_Lathyrus cicera_ is a robust legume reaching a height of 20-100 cm with copper-coloured flowers and canicular pods not winged at the corners, with angular brown or grey seeds with black markings; seeds and flowers are smaller than those of _L. sativus_. It is distributed in South and Mediterranean Europe (from Portugal to Italy to the Balkans and the Crimea), Crete, Aegean Isles, Cyprus, Syria, Lebanon, Palestine, Jordan, Egypt, Turkey, Caucasus, Iraq, Iran, Central Asia (Turkmenia to Palmir-Alai), Macronesia (Madeira, Canaries), North Africa (Morocco, Algeria, Tunisia, Libya) and introduced into South Africa. This species has shown very good adaptation to dryland conditions in southern Australia where two cultivars were recently released.

_Lathyrus ochrus_ is a spreading legume with winged stems reaching a height of 20-70 cm with solitary or pairs of yellow flowers and glabrous pods, fawn coloured at maturity with longitudinal laminae adpressed to the wings on the back, each pod containing 4-8 round black (or green, brown, cream), often pea-sized, seeds lightly covered with a bloom (wax), in some accessions. It is distributed in Mediterranean Europe (Portugal, Spain, South France, Corsica, Sardinia, Italy, Sicily, Malta, Yugoslavia, Greece), Crimea, Aegean Isles, Cyprus, Syria, Lebanon, Palestine, Turkey and North Africa (Morocco, Algeria, Tunisia, Libya). In Greece and Cyprus it is locally known as ‘fava’ and has been used for human consumption.

Chromosomal and cytogenetic studies have shown the genus _Lathyrus_ to be predominantly diploid with $2n=14$ chromosomes. The chromosome numbers of more than 60 species have been reported with only three species having been shown to have more than 14 somatic chromosomes (Campbell 1997). Two species (_L. pratensis_ and _L. venosus_) are tetraploid with $2n=28$ chromosomes and one species (_L. palustris_) is hexaploid with $2n=42$ chromosomes. These species have been studied cytologically and have been shown to be autopolyploids. Interspecific hybridization between species in the genus _Lathyrus_ has been attempted by many researchers since the report of the successful crossing of _L. hirsutus x L. odoratus_ by Baker (1916). However, only 16 cases have been reported as successful (Campbell 1997). Khawaja (1988) reported that _L. sativus_ crosses readily with _L. amphicarpus_ when the latter is used as the female parent. Cytological studies of the F1 hybrids between _L. amphicarpus x L. sativus, L. amphicarpus x L. cicera_ and _L. odoratus x L. chloranthus_ were carried out by Khawaja (1988) which showed 50-70% chromosome homology and pollen fertility in conformity with the meiotic pairing.

Plant regeneration techniques developed have been successful in regenerating plants from explants derived from stem, leaf and root tissue. The resulting plants showed a high amount of somoclonal variation in plant habit (Mehta _et al_. 1996). This technique may be successfully exploited in the production of agronomically desirable types for low $\beta$-N-Oxalyl-$\alpha$, $\beta$-Diaminopropionic acid (ODAP) lines and thus provides an alternative means of improvement than that allowed by conventional crossing and backcrossing methods.
DEFINITIONS AND USE OF THE DESCRIPTORS

IPGRI uses the following definitions in genetic resources documentation:

**Passport descriptors:** These provide the basic information used for the general management of the accession (including the registration at the genebank and other identification information) and describe parameters that should be observed when the accession is originally collected.

**Management descriptors:** These provide the basis for the management of accessions in the genebank and assist with their multiplication and regeneration.

**Environment and site descriptors:** These describe the environmental and site-specific parameters that are important when characterization and evaluation trials are held. They can be important for the interpretation of the results of those trials. Site descriptors for germplasm collecting are also included here.

**Characterization descriptors:** These enable an easy and quick discrimination between phenotypes. They are generally highly heritable, can be easily seen by the eye and are equally expressed in all environments. In addition, these may include a limited number of additional traits thought desirable by a consensus of users of the particular crop.

**Evaluation descriptors:** The expression of many of the descriptors in this category will depend on the environment and, consequently, special environmental designs and techniques are needed to assess them. Their assessment may also require complex biochemical or molecular characterization methods. This type of descriptors includes characters such as yield, agronomic performance, stress susceptibilities and biochemical and cytological traits. They are generally the most interesting traits in crop improvement.

Characterization will normally be the responsibility of genebank curators, while evaluation will typically be carried out elsewhere (possibly by a multidisciplinary team of scientists). The evaluation data should be fed back to the genebank which will maintain a data file.

Highly discriminating descriptors are marked as highlighted text.

The following internationally accepted norms for the scoring, coding and recording of descriptor states should be followed:

(a) the Système International d’Unités (SI) is used;

(b) the units to be applied are given in square brackets following the descriptor name;
standard colour charts, e.g. Royal Horticultural Society Colour Chart, Methuen Handbook of Colour, or Munsell Color Chart for Plant Tissues, are strongly recommended for all ungraded colour characters (the precise chart used should be specified in the section where it is used);

(d) the three-letter abbreviations from the International Standard (ISO) Codes for the representation of names of countries are used;

(e) many quantitative characters, which are continuously variable, are recorded on a 1-9 scale, where:

- 1 Very low
- 2 Very low to low
- 3 Low
- 4 Low to intermediate
- 5 Intermediate
- 6 Intermediate to high
- 7 High
- 8 High to very high
- 9 Very high

is the expression of a character. The authors of this list have sometimes described only a selection of the states, e.g. 3, 5 and 7, for such descriptors. Where this has occurred, the full range of codes is available for use by extension of the codes given or by interpolation between them, e.g. in Section 10 (Biotic stress susceptibility), 1 = very low susceptibility and 9 = very high susceptibility;

(f) when a descriptor is scored using a 1-9 scale, such as in (e), ‘0’ would be scored when (i) the character is not expressed, and (ii) a descriptor is inapplicable. In the following example, ‘0’ will be recorded if an accession does not have a central leaf lobe:

**Shape of central leaf lobe**
- 1 Toothed
- 2 Elliptic
- 3 Linear

(g) absence/presence of characters is scored as in the following example:

**Terminal leaflet**
- 0 Absent
- 1 Present

(h) blanks are used for information not yet available;
(i) for accessions which are not generally uniform for a descriptor (e.g. mixed collection, genetic segregation), the mean and standard deviation could be reported where the descriptor is continuous. Where the descriptor is discontinuous, several codes in the order of frequency could be recorded, or other publicized methods can be utilized, such as Rana et al. (1991), or van Hintum (1993), that clearly state a method for scoring heterogeneous accessions;

(j) dates should be expressed numerically in the format YYYYMDD, where
   YYYY  -  4 digits to represent the year
   MM     -  2 digits to represent the month
   DD     -  2 digits to represent the day.

4  *Lathyrus* spp.
1.7 Accession

1.7.1 Accession name
Either a registered or other formal designation assigned to the accession

1.7.2 Synonyms
Include here any previous identification other than the current name. Collecting number or newly assigned station names are frequently used as identifiers

1.8 Acquisition date [YYYYMMDD]
Date on which the accession entered the collection

1.9 Accession size
Approximate number or weight of seeds, tissue culture, etc. of an accession in the genebank

1.10 Type of material received
1 Seed
2 Plant (including seedlings)
3 Pollen
4 In vitro culture
99 Other (specify in descriptor 1.11 Notes)

1.11 Notes
Any additional information may be specified here

2. Collecting descriptors

2.1 Collecting institute(s)
Name and address of the institute(s) and individuals collecting/sponsoring the collection of the sample(s)

2.2 Collecting number [MCPD]
Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This item is essential for identifying duplicates held in different collections and should be unique and always accompany subsamples wherever they are sent

2.3 Collecting date of original sample [YYYYMMDD] [MCPD]
2.4 Country of collecting [MCPD]
Name of the country in which the sample was collected. Use the three-letter abbreviations from the International Standard (ISO) Codes for the representation of names of countries, No. 3166, 4th Edition. Copies of these are available from DIN: Deutsche Institute für Normung e.V., D-10772 Berlin, Germany; Tel. +30-2601-369; Fax +30-2601-1231, Tlx. 184 273-din-d; Web site URL: http://www.din.de/set/de/DIN.

2.5 Province/State
Name of the primary administrative subdivision of the country in which the sample was collected

2.6 Department/County
Name of the secondary administrative subdivision (within a Province/State) of the country in which the sample was collected

2.7 Location of collecting site [MCPD]
Distance in kilometers and direction from the nearest town, village or map grid reference point (e.g. CURITIBA 7S means 7 km south of Curitiba) and the name of the farm or other location and the farmer or other individual on whose land the sample was collected

2.8 Latitude of collecting site [MCPD]
Degrees and minutes followed by N (North) or S (South) (e.g. 1030S). Missing data (minutes) should be indicated with hyphen (e.g. 10-S)

2.9 Longitude of collecting site [MCPD]
Degrees and minutes followed by E (East) or W (West) (e.g. 07625 W). Missing data (minutes) should be indicated with hyphen (e.g. 076-W)

2.10 Elevation of collecting site [m asl] [MCPD]

2.11 Collecting source [MCPD]
The coding scheme provided can be used at two different levels of detail: either by using the global codes such as 1,2,3,4, or by using the more detailed coding such as 1.1, 1.2, 1.3, etc.

3 Market
   3.1 Town
   3.2 Village
   3.3 Urban area (around city)
   3.4 Other exchange system
4 Institute/Research organization
99 Other (specify in descriptor 2.21 Collector’s notes)

2.12 Collecting source environment
Use descriptors 6.1.1 to 6.1.22 in section 6

2.13 Status of sample [MCPD]
   0 Unknown
   1 Wild
   2 Weedy
   3 Traditional cultivar/Landrace
   4 Breeders’ line
   5 Advanced cultivar
   99 Other (specify in descriptor 2.21 Collector’s notes)

2.14 Type of sample
Type of plant material collected. If different types of material were collected from the same source, each sample type should be designated with a unique collecting number and a corresponding unique accession number
   1 Seed
   2 Vegetative
   3 Pollen
   4 Tissue culture
   99 Other (specify in descriptor 2.21 Collector’s notes)

2.15 Number of plants sampled
2.16 Occurrence of *Lathyrus* species in sampling area

2.18.8 Frequency of forage use
1 Daily
2 Weekly
3 Occasional
99 Other (specify in descriptor 2.21 Collector’s notes)

2.18.9 Seed palatability
1 Poor taste
2 Acceptable taste
3 Good taste
99 Other (specify in descriptor 2.21 Collector’s notes)

2.18.10 Forage palatability
1 Poor taste
2 Acceptable taste
3 Good taste
99 Other (specify in descriptor 2.21 Collector’s notes)

2.18.11 Main cooking methods (seed only)
1 Boiling
2 Baking
3 Roasting
4 Snacks
99 Other (specify in descriptor 2.21 Collector’s notes)

2.18.12 Number of recipes
Record the number of recipes for each descriptor state of 2.18.11, as available

2.18.13 History of plant used (seed only)
1 Ancestral/indigenous (always associated with the place and community)
2 Introduced (but in unknown distant past)
3 Introduced (time and introduction known)
2.18.14 Growing conditions
1 Wet land (flooded)
2 Wet land (raised beds)
3 Upland
4 Slopes
5 Natural swamp
6 Atoll (pits)
7 Relay crop (utra under rice field)
99 Other (specify in descriptor 2.21 Collector’s notes)

2.18.15 Cultural practices

2.18.15.1 Planting date [YYYYMMDD]

2.18.15.2 Harvest date [YYYYMMDD]

2.18.16 Cropping system
1 Monoculture
2 Intercropped (specify crop in descriptor 2.21 Collector’s notes)

2.18.17 Landrace popularity
Is the landrace/variety popular and widely grown? If yes, describe briefly why in descriptor 2.21 Collector’s notes
0 No
1 Yes

2.18.18 Market information
Specify if any premium price was assigned to this particular landrace/variety
0 No
1 Yes

2.18.18.1 Type of market
1 Local
2 National
3 International

2.18.19 Prevailing stresses
Information on associated biotic and abiotic stresses. Indicate if disease indexing was done at the time of collecting
### 2.18.20 Observation of lathyrism – human being
Is any information available relating to the cause of lathyrism associated with this collection? If so, provide details in descriptor **2.21 Collector’s notes**

<table>
<thead>
<tr>

</table>

### 2.21 Collector’s notes
Additional information recorded by the collector or any specific information in any of the above descriptors
MANAGEMENT

3. Management descriptors

3.1 Accession number (Passport 1.1)

3.2 Population identification (Passport 2.2)
Collecting number, pedigree, cultivar name, etc., depending on the population type

3.3 Seed storage location identifier
(Building, room, shelf number/location in medium- and/or long-term storage)

3.4 Storage date [YYYYMMDD]

3.5 Seed germination at storage (initial) [%]

3.6 Date of last seed germination test [YYYYMMDD]

3.7 Seed germination at the last test [%]

3.8 Date of next seed germination test [YYYYMMDD]
Estimated date when the accession should next be tested

3.9 Seed moisture content at harvest [%]

3.10 Seed moisture content at storage (initial) [%]

3.11 Type of stored plant material
1 Seed
2 Vegetative
3 Tissue
4 Pollen
99 Other (specify in descriptor 4.12 Notes)

3.12 Amount of seed in storage [g or number] (Passport 1.9)

3.13 Duplication at other location(s) (Passport 1.4)

3.14 In vitro conservation
3.14.1 **Type of explant**
1 Apical or axillary meristem
2 Nodal cutting
3 Zygotic embryo
4 Seed
99 Other (specify in descriptor 4.12 Notes)

3.14.2 **Date of introduction in vitro** [YYYYMMDD]

3.14.3 **Type of subculture material**
1 Axillary shoot
2 Callus
3 Cell suspension
4 Other (specify in descriptor 4.12 Notes)

3.14.4 **Regeneration process**
1 Organogenesis
2 Somatic embryogenesis
3 Other (specify in descriptor 4.12 Notes)

3.14.5 **Number of genotypes introduced in vitro**

3.14.6 **Number of replicates per genotype**

3.14.7 **Last subculture date** [YYYYMMDD]

3.14.8 **Medium used at the last subculture**

3.14.9 **Number of plants at the last subculture**

3.14.10 **Location after the last subculture**

3.14.11 **Next subculture date** [YYYYMMDD]
3.15 Cryopreservation

3.15.1 Type of material for cryopreservation
1 Seed
2 Zygotic embryo
3 Apex or axillary bud
4 Somatic embryo
5 Callus
6 Cell suspension
99 Other (specify in descriptor 4.12 Notes)

3.15.2 Introduction date in liquid nitrogen [YYYYMMDD]

3.15.3 Number of samples introduced into liquid nitrogen

3.15.4 End of storage period [YYYYMMDD]

3.15.5 Number of samples taken from liquid nitrogen

3.15.6 Type of subcultured material for recovery
(After liquid nitrogen)
1 Seed
2 Zygotic embryo
3 Apex or axillary bud
4 Somatic embryo
5 Callus
6 Cell suspension
99 Other (specify in descriptor 4.12 Notes)

3.15.7 Regeneration process
1 Organogenesis
2 Somatic embryogenesis
99 Other (specify in descriptor 4.12 Notes)

3.15.8 Number of recovered samples

3.15.9 Location after the last subculture

Lathyrus spp.
4. Multiplication/regeneration descriptors

4.1 Accession number

4.2 Population identification
Collecting number, pedigree, cultivar name, etc., depending on the population type

4.3 Field plot number

4.4 Multiplication/regeneration site location

4.5 Collaborator

4.6 Planting date [YYYYMMDD]

4.7 Cultural practices

4.7.1 Distance between plants [cm]
4.7.2 Distance between rows [cm]

4.7.3 Fertilizer application
Specify types, doses, frequency of each and method of application

4.8 Plant/seedling vigour
Assessed at 45 days after emergence
3 Low
5 Medium
7 High

4.9 Number of plants established

4.10 Previous multiplication and/or regeneration

4.10.1 Location
4.10.2 Sowing/planting date [YYYYMMDD]
4.10.3 Plot number

4.11 Number of times accession regenerated
Since the date of acquisition

4.12 Notes
Any additional information, including the information relating to method of isolation, selfing, sibbing, etc. may be specified here
ENVIRONMENT AND SITE

5. Characterization and/or evaluation site descriptors

5.1 Country of characterization and/or evaluation
(See instructions in descriptor 2.4 Country of collecting)

5.2 Site (research institute)

5.2.1 Latitude
Degrees and minutes followed by N (North) or S (South) (e.g. 1030S). Missing data (minutes) should be indicated with hyphen (e.g. 10-S).

5.2.2 Longitude
Degrees and minutes followed by E (East) or W (West) (e.g. 07625W). Missing data (minutes) should be indicated with hyphen (e.g. 076-W)

5.2.3 Elevation [m asl]

5.2.4 Name and address of farm or institute

5.3 Evaluator’s name and address

5.4 Sowing date [YYYYMMDD]

5.5 Harvest date [YYYYMMDD]

5.6 Evaluation environment
Environment in which characterization/evaluation was carried out

5.8 **Planting site in the field**
Give block, strip and/or row/plot numbers as applicable, plants/plot, replication

5.9 **Field spacing**

5.9.1 **Distance between plants in a row** [cm]

5.9.2 **Distance between rows** [cm]

5.10 **Seed germination** [%]
Percentage of plants germinated

5.10.1 **Days to germination** [d]
Specify number of days over which germination is measured

5.11 **Field establishment** [%]
Percent of plants established

5.11.1 **Days to establishment** [d]
Specify number of days from planting after which establishment is measured

5.12 **Environmental characteristics of site**
Use descriptors 6.1.1 to 6.1.22 in section 6

5.13 **Fertilizer**
Specify types used, doses, frequency of each and method of application

5.14 **Plant protection**
Specify pesticides used, doses, frequency of each and method of application

5.15 **Notes**
Any other site-specific information
6. Collecting and/or characterization/evaluation site environment descriptors

6.1 Site environment

6.1.1 Topography
This refers to the profile in elevation of the land surface on a broad scale. The reference is FAO (1990)

<table>
<thead>
<tr>
<th></th>
<th>Description</th>

15 Dune
16 Longitudinal dune
25 Rounded summit
26 Summit
27 Coral atoll
28 Drainage line (bottom position in flat or almost-flat terrain)
29 Coral reef
99 Other (specify in appropriate section’s Notes)

Fig. 1. Land element and position
6.1.4 **Slope [°]**
Estimated slope of the collecting site

6.1.5 **Slope aspect**
The direction that the slope on which the accession was collected faces. Describe the direction with symbols N, S, E, W (e.g. a slope that faces south west has an aspect of SW)

6.1.6 **Crop agriculture**
(From FAO 1990)
1 Annual field cropping
2 Perennial field cropping

6.1.7 **Overall vegetation surrounding and at the collecting site**
(Adapted from FAO 1990)
1 Grassland (Grasses, subordinate forbs, no woody species)
2 Forbland (Herbaceous plants predominant)
3 Forest (Continuous tree layer, crowns overlapping, large number of tree and shrub species in distinct layers)
4 Woodland (Continuous tree layer, crowns usually not touching, understorey may be present)
5 Shrubland (Continuous layer of shrubs, crowns touching)
6 Savanna (Grasses with a discontinuous layer of trees or shrubs)
99 Other (Specify in appropriate section’s Notes)

6.1.8 **Soil parent material**
(Adapted from FAO 1990)
Two lists of examples of parent material and rock are given below. The reliability of the geological information and the knowledge of the local lithology will determine whether a general or a specific definition of the parent material can be given. Saprolite is used if the in situ weathered material is thoroughly decomposed, clay-rich but still showing rock structure. Alluvial deposits and colluvium derived from a single rock type may be further specified by that rock type
6.1.8.1 **Unconsolidated material**

1. Aeolian deposits (unspecified)  
2. Aeolian sand  
3. Littoral deposits  
4. Lagoonal deposits  
5. Marine deposits  
6. Lacustrine deposits  
7. Fluvial deposits  
8. Alluvial deposits  
9. Unconsolidated (unspecified)  
10. Volcanic ash  
11. Loess  
12. Pyroclastic deposits  
13. Glacial deposits  
14. Organic deposits  
15. Colluvial deposits  
16. *in situ* weathered  
99. Other (specify in appropriate section’s Notes)

6.1.8.2 **Rock type**  
(Adapted from FAO 1990)

1. Acid igneous/  
   Metamorphic rock  
2. Granite  
3. Gneiss  
4. Granite/gneiss  
5. Quartzite  
6. Schist  
7. Andesite  
8. Diorite  
9. Basic igneous/  
   metamorphic rock  
10. Ultra basic rock  
11. Gabbro  
12. Basalt  
13. Dolerite  
14. Volcanic rock  
15. Sedimentary rock  
16. Limestone  
17. Dolomite  
18. Sandstone  
19. Quartzitic sandstone  
20. Shale  
21. Marl  
22. Travertine  
23. Conglomerate  
24. Siltstone  
25. Tuff  
26. Pyroclastic rock  
27. Evaporite  
28. Gypsum rock  
99. Others (specify in appropriate section’s Notes)

6.1.9 **Stoniness/rockiness/hardpan/cementation**

1. Tillage unaffected  
2. Tillage affected  
3. Tillage difficult  
4. Tillage impossible  
5. Essentially paved
6.1.10 **Soil drainage**  
(Adapted from FAO 1990)  
3 Poorly drained  
5 Moderately drained  
7 Well drained

6.1.11 **Soil depth to groundwater table**  
(Adapted from FAO 1990)  
The depth to the groundwater table, if present, as well as an estimate of the approximate annual fluctuation, should be given. The maximum rise of the groundwater table can be inferred approximately from changes in profile colour in many, but not all, soils.  
1 0 - 25 cm  
2 25.1 - 50 cm  
3 50.1 - 100 cm  
4 100.1 - 150 cm  
5 > 150 cm

6.1.12 **Soil salinity**  
1 <160 ppm dissolved salts  
2 160-240 ppm  
3 241-480 ppm  
4 >480 ppm

6.1.13 **Soil matrix colour**  
(Adapted from FAO 1990)  
The colour of the soil matrix material in the root zone around the accession is recorded in the moist condition (or both dry and moist condition, if possible) using the notation for hue, value and chroma as given in the Munsell Soil Color Charts (Munsell Color 1975). If there is no dominant soil matrix colour, the horizon is described as mottled and two or more colours are given and should be registered under uniform conditions. Early morning and late evening readings are not accurate. Provide depth of measurement [cm]. If colour chart is not available, the following states may be used:  
1 White  
2 Red  
3 Reddish  
4 Yellowish red  
5 Brown  
6 Brownish  
7 Reddish brown  
8 Yellowish brown  
9 Yellow  
10 Reddish yellow  
11 Greenish, green  
12 Grey  
13 Greyish  
14 Blue  
15 Bluish-black  
16 Black
6.1.14 Soil pH
Actual value of the soil pH within the following root depths around the accession, record only at one of the following depths:

6.1.14.1 pH at 0-10 cm
6.1.14.2 pH at 11-15 cm
6.1.14.3 pH at 16-30 cm
6.1.14.4 pH at 31-60 cm
6.1.14.5 pH at 61-90 cm

6.1.15 Soil erosion
3 Low
5 Intermediate
7 High

6.1.16 Rock fragments
(Adapted from FAO 1990)
Large rock and mineral fragments (>2 mm) are described according to abundance
1 0 – 2%
2 2.1 – 5%
3 5.1 – 15%
4 15.1 – 40%
5 40.1 – 80%
6 > 80%
6.1.17 Soil texture classes
(Adapted from FAO 1990)
For convenience in determining the texture classes of the following list, particle size classes are also given for each of the fine earth fraction listed below. (See Fig. 2)

1  Clay   12  Coarse sandy loam
2  Loam   13  Loamy sand
3  Clay loam   14  Loamy very fine sand
4  Silt   15  Loamy fine sand
5  Silty clay   16  Loamy coarse sand
6  Silty clay loam   17  Very fine sand
7  Silt loam   18  Fine sand
8  Sandy clay   19  Medium sand
9  Sandy clay loam   20  Coarse sand
10  Sandy loam   21  Sand, unsorted
11 Fine sandy loam   22  Sand, unspecified

Fig. 2. Soil texture classes
6.1.17.1 Soil particle size classes
(Adapted from FAO 1990)

1. Clay < 2 µm
2. Fine silt 3 - 20 µm
3. Coarse silt 21 - 63 µm
4. Very fine sand 64 - 125 µm
5. Fine sand 126 - 200 µm
6. Medium sand 201 - 630 µm
7. Coarse sand 631 - 1250 µm
8. Very coarse sand 1251 - 2000 µm

6.1.18 Soil organic matter content
1. Nil (as in arid zones)
2. Low (as in long-term cultivation in tropical setting)
3. Medium (as in recently cultivated but not yet much depleted)
4. High (as in never cultivated, and in recently cleared from forest)
5. Peaty

6.1.19 Soil taxonomic classification
As detailed a classification as possible should be given. This may be taken from a soil survey map. State class (e.g., Alfisols, Spodosols, Vertisols, etc.)

6.1.20 Water availability
1. Rain-fed
2. Irrigated
3. Flooded
4. River banks
5. Sea coast
99. Other (specify in appropriate section’s Notes)

6.1.21 Soil fertility
General assessment of the soil fertility based on existing vegetation
3. Low
5. Moderate
7. High

6.1.22 Climate of the site
Should be assessed as close to the site as possible (State number of recorded years)

6.1.22.1 Temperature [°C]
Provide either the monthly or the annual mean
6.1.22.2 Dry season length [d]

6.1.22.3 Rainfall [mm]
Provide either the monthly or the annual mean (state number of recorded years)

6.1.22.4 Wind [m/s]
Annual average (state number of years recorded)

   6.1.22.4.1 Frequency of typhoons or hurricane force winds
       3 Low
       5 Intermediate
       7 High

   6.1.22.4.2 Date of most recent typhoons or hurricane force winds [YYYYMMDD]

   6.1.22.4.3 Annual maximum wind velocity [m/s]

6.1.22.5 Frost

   6.1.22.5.1 Date of most recent frost [YYYYMMDD]
   6.1.22.5.2 Lowest temperature [°C]
   Specify seasonal average and minimum survival temperature
   6.1.22.5.3 Duration of temperature below 0°C [d]

6.1.22.6 Relative humidity

   6.1.22.6.1 Relative humidity diurnal range [%]
   6.1.22.6.2 Relative humidity seasonal range [%]

6.1.22.7 Light
   3 Shady
   7 Sunny

6.1.22.8 Daylength [h]
Provide either the monthly (mean, maximum, minimum) or the seasonal (mean, maximum, minimum)
CHARACTERIZATION

7. Plant descriptors
For all quantitative descriptors (metric traits), record the average of at least five measurements per individual accession. Most of the observations should be made at maximum vegetative growth stage (at 50% flowering), unless otherwise specified.

To make the colour description as simple as possible and because of the complexity and difficulty in recording colour descriptors since most of them include colour variations, it was decided to list only the main colours.

7.1 Vegetative characters

7.1.1 Epicotyl colour
Recorded 10 days after emergence
1 Light green
2 Green
3 Green-purple
4 Purple
99 Other (specify in descriptor 7.10 Notes)

7.1.2 Hypocotyl colour
Recorded 10 days after emergence
1 Light green
2 Green
3 Green-purple
4 Purple
99 Other (specify in descriptor 7.10 Notes)

7.1.3 Seedling vigour
Recorded 20 days after emergence
3 Poor
5 Intermediate
7 Vigorous

7.1.4 Plant growth rate – stage I
Recorded during emergence to flowering initiation
3 Low
5 Medium
7 High
7.1.5 Plant growth rate – stage II
Recorded after flowering initiation
3 Low
5 Medium
7 High

7.1.6 Plant growth habit
Recorded at the beginning of flowering period. (See Fig. 3)
1 Prostrate
2 Spreading
3 Semi-erect
4 Erect

Fig. 3. Plant growth habit
7.1.7 **Plant type**

1. Indeterminate
2. Determinate

7.2 **Stem characters**

7.2.1 **Plant height** [cm]
Height of plant at physiological maturity measured from ground to the tip of the longest branch

7.2.2 **Nodes per plant**
Recorded on the main branch

3. Few
5. Medium
7. Many

7.2.3 **Internode length**
Recorded on the main branch

3. Small
5. Medium
7. Large

7.2.4 **Nodes to the first bearing pod**
Count the total number of nodes to the first pod-bearing position on the main branch

7.2.5 **Stem colour**
Recorded at 50% flowering

1. Light green
2. Green
3. Purple-green
4. Purple
99. Other (specify in descriptor 7.10 Notes)

7.2.6 **Stem thickness** [mm]
Measured at the middle of the main branch at 50% flowering
7.2.7  **Stem wing width**
Assessed at the middle of the main branch at 50% flowering
- 0  Wingless
- 3  Narrow
- 5  Medium
- 7  Wide

7.2.8  **Stem waxy coating**
- 0  No coating
- 3  Small
- 5  Medium
- 7  Large

7.2.9  **Stem section shape**
- 1  Round
- 2  Square
- 3  Deeply fasciated
- 99  Other (specify in descriptor 7.10 Notes)

7.3  **Branch characters**

7.3.1  **Branch arrangements**
- 1  Evenly distributed throughout the whole plant
- 2  Mainly on lower part of the plant
- 3  Mainly in middle part of the plant

7.3.2  **Number of primary branches**
Counted at first pod maturity (only pod-bearing branches)

7.3.3  **Length of primary branch**  [cm]
Measure the longest branch

7.3.4  **Number of secondary branches**
Counted at first pod maturity (only pod-bearing branches)

7.4  **Root characters**

7.4.1  **Root length**  [cm]

7.4.2  **Root nodulation at full blooming stage**
- 0  No nodules
- 3  Low
- 5  Intermediate
- 7  High
7.4.3 Nodulation activity
0 Absent (non-active)
1 Present (active nodules)

7.5 Leaf characters

7.5.1 Anthocyanin pigmentation on leaf
Recorded at 50% flowering
0 Absent
1 Present

7.5.2 Leaf type
1 Tendril
2 Phyllody
3 Simple (lamina not bifurcated into leaflets)
4 Bipinnate
5 Multipinnate
99 Other (specify in descriptor 7.10 Notes)

7.5.3 Number of leaflets per leaf
1 One pair
2 Two pairs
3 More than two pairs

7.5.4 Leaf colour
1 Light green
2 Green
3 Dark green
99 Other (specify in descriptor 7.10 Notes)

7.5.5 Prominence of leaf vein
0 No
1 Yes

7.5.6 Pigmentation of leaf vein
0 No
1 Yes

7.5.7 Leaf size
Recorded at 50% flowering from the middle area of the main branch
3 Small
5 Medium
7 Large
7.5.8 Leaflet length [cm]
Maximum length of leaf lamina recorded from the middle area of the main branch

7.5.9 Leaflet width [cm]
Maximum width of leaf lamina recorded from the middle area of the main branch

7.5.10 Leaflet shape
(See Fig. 4)
1 Linear
2 Lanceolate
3 Ovate-lanceolate
4 Ovate
99 Other (specify in descriptor 7.10 Notes)

Fig. 4. Leaflet shape

7.5.11 Leaf petiole length [cm]
Measured from the base to the point where leaf intersects petiole

7.5.12 Leaf petiole colour
1 Green
2 Purple-green
99 Other (specify in descriptor 7.10 Notes)

7.5.13 Leaf tendrils
0 Absent
1 Short
2 Medium
3 Long
99 Other (specify in descriptor 7.10 Notes)
### 7.5.14 Top leaves – petiole end
- 1 Tendril subulate
- 2 Tendril simple
- 3 Tendril compound
- 99 Other (specify in descriptor 7.10 Notes)

### 7.5.15 Lower leaves – petiole end
- 1 Tendril subulate
- 2 Tendril simple
- 3 Tendril compound
- 99 Other (specify in descriptor 7.10 Notes)

### 7.5.16 Leaf persistence
Recorded when 80% of pods have reached maturity
- 3 Low
- 5 Moderate
- 7 High

### 7.5.17 Leaf senescence
Recorded when 80% of pods have reached maturity
- 0 No visual senescence
- 3 Slight visual senescence
- 5 Moderate senescence
- 7 Conspicuous concurrent senescence

### 7.5.18 Leaf pubescence
- 0 Absent
- 1 Present

### 7.5.19 Presence of pubescence
- 1 Upper surface of leaf
- 2 Lower surface of leaf
- 3 Both upper and lower surfaces of leaf
- 4 Only on leaf margin
- 99 Other (specify in descriptor 7.10 Notes)

### 7.5.20 Leaf scale type
- 1 Subulate
- 2 Linear
- 3 Half shaft-shaped
- 4 Shaft-shaped
- 5 Heart-shaped
- 99 Other (specify in descriptor 7.10 Notes)
7.5.21 Leaf scale size
3 Small
5 Medium
7 Large

7.6 Inflorescence characters

7.6.1 Days to first flowering [d]
Number of days from sowing to when the first flower opens

7.6.2 Days to 50% flowering [d]
Number of days from sowing to stage when 50% of plants have begun to flower in a row

7.6.3 Days to first mature pod [d]
Number of days from sowing to first mature pod separating from plant

7.6.4 Days to maturity [d]
From sowing to when 80% of plants have mature pods

7.6.5 Maturation period [d]
Number of days from first flowering to first mature pod

7.6.6 Peduncle length [cm]
Measured as the mean length of randomly chosen peduncles at maturity

7.6.7 Flower bud shape
(Just before opening)
1 Globular
2 Intermediate
3 Long
99 Other (specify in descriptor 7.10 Notes)

7.6.8 Flower bud size
(Just before opening)
3 Small
5 Medium
7 Large
### 7.6.9 Flower size

1. Small
2. Medium
3. Large

### 7.6.10 Mean length of standard petal [cm]
Measured on randomly selected, fully expanded flowers

### 7.6.11 Mean width of standard petal [cm]
Measured on randomly selected, fully expanded flowers

### 7.6.12 Flower colour

Score on fresh, open flowers for score standard, wing and keel colours separately

1. White
2. White blue
3. Blue
4. Grey
5. Light yellow
6. Yellow
7. Pink
8. Orange
9. Red
10. Violet-blue
11. Violet
99. Other (specify in descriptor 7.10 Notes)

### 7.6.13 Flower vein colour

1. Blue
2. Grey
3. Violet
4. Yellow
99. Other (specify in descriptor 7.10 Notes)

### 7.6.14 Calyx colour

1. Light green
2. Green
3. Green-purple
99. Other (specify in descriptor 7.10 Notes)
### 7.6.15 Calyx teeth length
1. Shorter than tube
2. Equal to tube
3. Longer than tube

### 7.6.16 Calyx teeth width
3. Narrow
5. Medium
7. Broad

### 7.6.17 Calyx teeth shape
1. Sharp
2. Blunt
99. Other (specify in descriptor 7.10 Notes)

### 7.6.18 Rate of flower droop [%]
Recorded up to 50% pod maturity

### 7.6.19 Pod-bearing position [cm]
Recorded as height to the lowest pod (see descriptor 7.2.4)

### 7.6.20 Pod-bearing length [cm]
Recorded as length of stem between the lowest pod-bearing position to the topmost pod-bearing position

### 7.7 Pod characters

#### 7.7.1 Number of pods per peduncle
1. One
2. Two
3. Three
99. Other (specify in descriptor 7.10 Notes)

#### 7.7.2 Number of pods per plant
Mean number of pods. Recorded from randomly selected plants at physiological maturity

#### 7.7.3 Number of effective pods
Mean number of pods having seed(s). Recorded from randomly selected plants at physiological maturity
7.7.4 Pod shape

(See Fig. 5)

1 Oblong-elliptical
2 Medium oblong-elliptical
3 Curved
4 Beaded
5 Broad-linear
6 Broad-elliptical
99 Other (specify in descriptor 7.10 Notes)

Fig. 5. Pod shape
7.7.5 **Pod curvature**
Recorded on mature pods. (See Fig. 6)

1. Straight
2. Slightly curved
3. Curved

Fig. 6. Pod curvature

7.7.6 **Pod beak shape**
(See Fig. 7)

1. Pointed
2. Blunt
99. Other (specify in descriptor 7.10 Notes)

Fig. 7. Pod beak shape

7.7.7 **Pod beak length**
Recorded on a fully expanded immature pod from end of last loculus up to the pod tip

0. Absent
3. Short
5. Medium
7. Long
7.7.8 Immature pod colour
1 Yellow-cream
2 Light green
3 Green
4 Dark green
5 Green-purple
6 Light purple
7 Purple
99 Other (specify in descriptor 7.10 Notes)

7.7.9 Mature pod colour
1 Yellow-green
2 Violet mottled
3 Grey
99 Other (specify in descriptor 7.10 Notes)

7.7.10 Pattern of pod veins
1 Longitudinal
2 Netted
99 Other (specify in descriptor 7.10 Notes)

7.7.11 Pod length [cm]
Maximum mean length of randomly selected mature pods. Recorded at physiological maturity

7.7.12 Pod width [cm]
Maximum mean width of randomly selected mature pods. Recorded at physiological maturity

7.7.13 Pod wings
0 Absent
3 Narrow
5 Medium
7 Wide

7.7.14 Pod pubescence
0 Absent
3 Low
5 Medium
7 High
7.7.15  **Constriction of pods between the seeds**
(See Fig. 8)
0  Absent
3  Slight
5  Medium
7  Pronounced

Fig. 8. Constriction of pods between the seeds

7.7.16  **Number of seeds per pod**
Mean number of seeds counted on randomly selected pods. Recorded at physiological maturity

7.7.17  **Pod dehiscence**
Scored one week after maturity
0  No shattering
3  Low shattering
5  Medium shattering
7  High shattering
### 7.8 Seed characters

#### 7.8.1 Seed shape

(See Fig. 9)

<table>

7.10 Notes
### 7.8.4 Seed coat surface
1. Smooth
2. Tubercular

### 7.8.5 Seed coat pattern
0. Absent
1. Marbled
2. Dotted
3. Streaked
4. Mixture (any combination of 1, 2 and 3)

### 7.8.6 Seed coat pattern colour
1. Cream
2. Green
3. Brown
4. Red-purple
5. Black
99. Other (specify in descriptor 7.10 Notes)

### 7.8.7 Cotyledon colour
Recorded after removing the seed coat
1. Yellow
2. Orange
99. Other (specify in descriptor 7.10 Notes)

### 7.8.8 Seed eye width
3. Narrow
5. Medium
7. Wide

### 7.8.9 Seed ornamentation
0. Absent
1. Present

#### 7.8.10 100-seed weight [g]
Weight of 100 randomly selected mature seeds at 8-10% (air-dry) seed moisture content

#### 7.8.11 Seed volume [cm³]
Recorded on the basis of 94% ethanol displaced by 100 seeds

#### 7.8.12 Seed yield per plant [g]
Recorded as mean weight of seeds on five randomly selected plants
### 7.9 Forage characters

#### 7.9.1 Early vigour
Recorded at 8-10 leaf stage
- 3 Poor
- 5 Medium
- 7 Good

#### 7.9.2 Herbage yield – Fall season
- 3 Poor
- 5 Medium
- 7 Good

#### 7.9.3 Herbage yield – Spring season
- 3 Poor
- 5 Medium
- 7 Good

#### 7.9.4 Regeneration
- 0 Absent
- 1 Present

#### 7.9.5 Vigour of regrowth after cutting
- 3 Poor
- 5 Medium
- 7 Good

#### 7.9.6 Leaf : stem ratio
Recorded at 50% flowering
- 3 Poor (main stem easily visible)
- 5 Medium
- 7 Good (very leafy)

#### 7.9.7 Relative biological yield
Recorded in comparison with other forage legumes (specify the name of crop used for comparison)

### 7.10 Notes
Any additional information, especially in the category of “Other” under various descriptors above, may be specified here
EVALUATION

8. Plant descriptors

8.1 Agronomic characters

8.1.1 Physiological seed maturity
1 Very early
2 Early
3 Intermediate
4 Late
5 Very late
6 Undetermined growth

8.1.2 Overall appearance (desirability)
Rating based on overall appearance of the accession compared with other accessions and checks. Data for perennials to be recorded during the second year
3 Poor
5 Medium
7 Good

8.1.3 Lodging susceptibility
Scored at seed maturity
0 None (all plants standing)
3 Low
5 Medium
7 High

8.1.4 Biological yield per plant – Fall season [g]
Yield of dried, mature plants after pulling

8.1.5 Biological yield per plant – Spring season [g]
Yield of dried, mature plants after pulling

8.1.6 Harvest index [%]
Ratio of total grain to total biological yield taken from randomly selected plants in a row

8.1.7 Shelling [%]
Calculated from seed to pod ratio of randomly selected plants in a row
8.1.8 Milling [%]
Yield of de-husked cotyledons (*Dhal*)

8.2 Quality characters

8.2.1 Seed crude protein content [g/100 g DW]

8.2.2 Fodder crude protein content [g/100 g DW]

8.2.3 Amino acid composition [µg/g DW]
Estimate essential amino acids in seed sample [FAO 1991]

8.2.4 β-N-Oxalyl-L-α, β-Diaminopropionic Acid (ODAP) content [%]
Estimate ODAP content in dry seeds and any other plant part (specify such as dry cotyledons, dry embryo, etc.)

8.2.5 Fodder crude fiber content [g/100 g DW]

8.2.6 Fodder digestible fiber content [g/100 g DW]

8.2.7 Cooking time [min]
Minutes taken to cook to mashing stage

8.2.7.1 Cooking time of *Dhal* [min]

8.2.7.2 Cooking time of dry seeds [min]

8.3 Chemical analysis

8.3.1 Dry matter content [g/100 g DM]

8.3.2 Micronutrients content
Indicate if Manganese, Zinc, Copper, etc. in descriptor 8.4 Notes

8.3.3 Analysis of anti-nutritional factors
Indicate if Tannin, Trypsin inhibitors, Chymotrypsin inhibitor, Lactins, Amylase inhibitors, Soponis, Phytic acid, etc. in descriptor 8.4 Notes

8.4 Notes
Specify here any other additional information
9. **Abiotic stress susceptibility**

Scored under artificial and/or natural conditions, which should be clearly specified. These are coded on a susceptibility scale from 1 to 9, viz.:

1. Very low or no visible sign of susceptibility
2. Low
3. Intermediate
4. High
5. Very high

9.1 **Reaction to higher temperature**

Scored under natural conditions during daytime for at least four weeks.

9.2 **Reaction to drought**

Scored under natural conditions during daytime for at least four weeks.

9.3 **Reaction to high soil moisture**

Scored under paddy conditions.

9.4 **Reaction to soil salinity**

9.5 **Reaction to high soil acidity**

(pH < 4.5)

9.6 **Reaction to alkalinity**

9.7 **Reaction to shade**

9.8 **Reaction to constant winds**

9.9 **Notes**

Specify any additional information here.

10. **Biotic stress susceptibility**

In each case, it is important to state the origin of the infestation or infection, i.e. natural, field inoculation, and laboratory. Also specify the causal organism and the corresponding symptoms. Record such information in descriptor **10.6 Notes**. These are coded on a susceptibility scale from 1 to 9, viz.:

1. Very low or no visible sign of susceptibility
2. Low
3. Intermediate
4. High
5. Very high

10.6 Notes

Specify here any additional information
11. Biochemical markers
Specify methods used and cite reference(s)

11.1 Isozymes
For each enzyme, indicate the tissue analyzed and the zymogram type. A particular enzyme can be recorded as 11.1.1; 11.1.2, etc. Examples include: Acid phosphatase (ACPH); Esterases α and β (EST A and B); Isocitrate dehydrogenase (ICD); Malate dehydrogenase (MDH); Phosphogluconate dehydrogenase (PGD); Phosphoglucose isomerase (PGI); Phosphoglucose mutase (PGM); Peroxidases

11.2 Other biochemical markers
(e.g. Polyphenol profile)

12. Molecular markers
Describe any specific discriminating or useful trait for this accession. Report probe-enzyme combination analyzed. Below are listed some of the basic methods most commonly used

12.1 Restriction fragment length polymorphism (RFLP)
Report probe/enzyme combination (approach can be for nuclear, chloroplast or mitochondrial genomes)

12.2 Amplified fragment length polymorphism (AFLP)
Report primer pair combinations and accurate molecular size of products (used for nuclear genomes)

12.3 DNA amplification fingerprinting (DAF); random amplified polymorphic DNA (RAPD); AP-PCR
Accurately report experimental conditions and molecular size of products (used for nuclear genomes)

12.4 Sequence-tagged microsatellites (STMS)
Report primer sequences, and accurate product sizes (can be used for nuclear or chloroplast genomes)

12.5 PCR-sequencing
Report PCR primer sequences, and derived nucleotide sequence (can be used for single copy nuclear, chloroplast or mitochondrial genomes)

12.6 Other molecular markers
13. Cytological characters

13.1 Chromosome number

13.2 Ploidy level
(2x, 3x, 4x, etc.)

13.3 Meiosis chromosome associations
Average of 50 microspore mother cells, observed during metaphase 1

13.4 Other cytological characters

14. Identified genes
Describe any known specific mutant present in the accession

ACKNOWLEDGEMENTS

IPGRI wishes to place on record their sincere thanks to the numerous *Lathyrus* workers around the world who have contributed directly or indirectly to the development of the Descriptors for *Lathyrus*.

Dr P.N. Mathur of IPGRI-APO coordinated the development and review of this publication. Ms Adriana Alercia supervised the production of the text up to the publication stage and provided scientific and technical expertise. Ms Linda Sears edited the text and Ms Patrizia Tazza prepared the cover and the layout. Mr Paul Stapleton managed the production of the publication. Ir. Tom Hazekamp provided scientific advice and supervised the overall process. Technical and scientific advice provided by Drs Ramanath Rao, Bhag Mal, F. Morales, T. Hodgkin and F. Engelmann is gratefully acknowledged.
ANNEX I. Multicrop Passport Descriptors

This list of multicrop passport descriptors has been developed jointly by IPGRI and FAO to provide consistent coding schemes for common passport descriptors across crops. These descriptors aim to be compatible with future IPGRI crop descriptor lists and with the descriptors to be used for the FAO World Information and Early Warning System (WIEWS) on plant genetic resources.

The list should NOT be regarded as a minimum descriptor list, since many additional passport descriptors are essential for the description of crops and need to be recorded. This document lists an initial set of common passport descriptors at the multicrop level. At a later stage the list could be expanded with additional multicrop descriptors. For example, descriptors dealing with the use of germplasm are currently not included, but their suitability for inclusion at the multicrop level will be investigated. Future expansion could even result in the development of more specialized lists of common descriptors at the crop group level.

Printed here is the latest version of the list (1997) which contains two sections. The latter one (FAO WIEWS DESCRIPTORS) lists a number of optional descriptors used in the FAO WIEWS. The list provides descriptions of content and coding schemes, but also provides suggested fieldnames (in parentheses) that can assist in the computerized exchange of this type of data.

Please forward your feedback on the use of this list to:
   Germplasm Documentation

   Fax: (+39) 065750309
### MULTICROP PASSPORT DESCRIPTORS

1. **Institute code** *(INSTCODE)*
   Code of the institute where the accession is maintained. The codes consist of the 3-letter ISO 3166 country code of the country where the institute is located plus number or an acronym as specified in the Institute database that will be made available by FAO. Preliminary codes (i.e. codes not yet incorporated in the FAO Institute database) start with an asterisk followed by a 3-letter ISO 3166 country code and an acronym.

2. **Accession number** *(ACCENUMB)*
   This number serves as a unique identifier for accessions and is assigned when an accession is entered into the collection. Once assigned this number should never be reassigned to another accession in the collection. Even if an accession is lost, its assigned number should never be reused. Letters should be used before the number to identify the genebank or national system (e.g. IDG indicates an accession that comes from the genebank at Bari, Italy; CGN indicates an accession from the genebank at Wageningen, The Netherlands; PI indicates an accession within the USA system).

3. **Collecting number** *(COLLNUMB)*
   Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This item is essential for identifying duplicates held in different collections. It should be unique and always accompany subsamples wherever they are sent.

4. **Genus** *(GENUS)*
   Genus name for taxon. Initial uppercase letter required.

5. **Species** *(SPECIES)*
   Specific epithet portion of the scientific name in lowercase letters plus authority. Following abbreviation is allowed: “sp.”

6. **Subtaxa** *(SUBTAXA)*
   Subtaxa can be used to store any additional taxonomic identifier plus authority. Following abbreviations are allowed: “ssp.” (for subspecies); “var.” (for variety); “convar.” (for convariety); “f.” (for form).

7. **Accession name** *(ACCNAME)*
   Either a registered or other formal designation given to the accession. First letter uppercase. Multiple names separated with semicolon.

8. **Country of origin** *(ORIGCTY)*
   Name of the country in which the sample was originally collected or derived. Use the ISO 3166 extended codes, (i.e. current and old 3 letter ISO 3166 country codes).

9. **Location of collecting site** *(COLLSITE)*
   Location information below the country level that describes where the accession was collected starting with the most detailed information. Might include the distance in kilometers and direction from the nearest town, village or map grid reference point, (e.g. CURITIBA 7S, PARANA means 7 km south of Curitiba in the state of Parana).

10. **Latitude of collecting site** *(LATITUDE)*
    Degrees and minutes followed by N (North) or S (South) (e.g. 1030S). Missing data (minutes) should be indicated with hyphen (e.g. 10–S).

---

1 Authority is only provided at the most detailed taxonomic level
11. **Longitude of collecting site** *(LONGITUDE)*
Degrees and minutes followed by E (East) or W (West) (e.g. 07625W). Missing data (minutes) should be indicated with hyphen (e.g. 076–W).

12. **Elevation of collecting site** *[m asl]* *(ELEVATION)*
Elevation of collecting site expressed in meters above sea level. Negative values allowed.

13. **Collecting date of original sample** *[YYYYMMDD]* *(COLLDATE)*
Collecting date of the original sample where YYYY is the year, MM is the month and DD is the day.

14. **Status of sample** *(SAMPSTAT)*
- 1 Wild
- 2 Weedy
- 3 Traditional cultivar/Landrace
- 4 Breeder’s line
- 5 Advanced cultivar

15. **Collecting source** *(COLLSRC)*
The coding scheme proposed can be used at 2 different levels of detail: Either by using the global codes such as 1, 2, 3, 4 or by using the more detailed coding such as 1.1, 1.2, 1.3 etc.

16. **Donor institute code** *(DONORCODE)*
Code for the donor institute. The codes consist of the 3-letter ISO 3166 country code of the country where the institute is located plus number or an acronym as specified in the Institute database that will be made available by FAO. Preliminary codes (i.e. codes not yet incorporated in the FAO Institute database) start with an asterisk followed by a 3-letter ISO 3166 country code and an acronym.

17. **Donor number** *(DONORNUMB)*
Number assigned to an accession by the donor. Letters should be used before the number to identify the genebank or national system (e.g. IDG indicates an accession that comes from the genebank at Bari, Italy; CGN indicates an accession from the genebank at Wageningen, The Netherlands; PI indicates an accession within the USA system).

18. **Other number(s) associated with the accession** *(OTHERNUMB)*
Any other identification number known to exist in other collections for this accession. Letters should be used before the number to identify the genebank or national system (e.g. IDG indicates an accession that comes from the genebank at Bari, Italy; CGN indicates an accession from the genebank at Wageningen, The Netherlands; PI indicates an accession within the USA system). Multiple numbers can be added and should be separated with a semicolon.

19. **Remarks** *(REMARKS)*
The remarks field is used to add notes or to elaborate on descriptors with value “99” (=Other). Prefix remarks with the field name they refer to and a colon (e.g. COLLSRC: roadside). Separate remarks referring to different fields are separated by semicolons.
